

Wiki documentation is **intention**-based, and often outdated.

Living documentation is **up-to-date, automated**, and closes the gap between intended and really deployed.

We want to support the **Product vision** and document for different **audiences** and **perspectives**.

Living documentation hub

A set of **connected web portals** for every perspective, organized by product.

Portal	Perspective	Audience
doc-hub	product documentation	PM, BA
api-hub	product API	solution architects, developers, PM, BA
model-hub	product architecture	solution architects, developers
dev-hub	product development	developers
qa-hub	product quality	quality engineers
ux-hub	product user experience	UX designers

Capabilities

doc-hub	api-hub	model-hub	dev-hub	qa-hub	ux-hub
create	onboarding	c4-landscape	<i>guidelines</i>	reports	design-system
search	scoring	c4-system	patterns	campaigns	components
-	contracts catalog	c4-containers	mcp	<i>guidelines</i>	mockups
-	registry	c4-components	-	requirements	-
-	discovery	c4-deployment	-	nfr	-
-	monitoring	dependencies	-	-	-
-	lifecycle	monitoring	-	-	-
-	<i>change management</i>	appmap	-	-	-
-	mocking	processes	-	-	-
-	<i>guidelines</i>	dsl	-	-	-
-	REST, GraphQL	mcp	-	-	-
-	Grpc, Async	-	-	-	-
-	mcp	-	-	-	-

Content management

The content is mainly provisioned by **automation**, ie, CI.CD pipelines on 'develop' branch, campaigns executions, HELM deployments, and observability.

Solution proposal

- Microservices architecture
- Content-driven web frontend with [Astro](#)
- Registry with [Strapi](#) CMS
- [Microcks](#) for contract-first API mocking and testing
- DDD modeling with [Context Mapper](#) DSL
- Architecture modeling with [LikeC4](#) or [EventCatalog](#) DSL
- UML modeling with [PlantUML](#) DSL
- BPMN and DMN modeling with [bpmn.io](#)
- Code behaviour visualization with [AppMap](#)
- [Allure](#) and [Serenity BDD](#) for tests reporting
- [reshapr](#), your API as an MCP server
- [solo.io](#), an MCP server registry
- SpringBoot, Node.js, Typescript

Plan

- MVP with **DCP**: **API catalog**, **C4 workspace**, and **EventCatalog**
- MVP: **doc-hub**, **api-hub**, **model-hub**
- To evangelize the Living Documentation Hub to the **Pictet Tech** community
- To collaborate with **Ops**
- To onboard **Dev** teams with their **APIs** and **C4** workspaces
- To onboard **QA** and **UX** teams: **qa-hub**, **ux-hub**
- To build **MCP** use cases and promote an **mcp-hub**

Thanks.

“ Stay **up-to-date**, stay informed, and stay ahead with our **Living Documentation Hub**. ”
