

Olivier von Dach

Software craftsman, **developer advocate**, and **technical architect** DevOps.

Front Tech Team - PWM, DCP, OBI, eSignature, Observability.

AI, a game changer.

More, better, inside the same time window.

Usefull AI

The **quality** of the **input** determines the output one.

Software development in a nutshell

Event storming > User journey, System design

Story mapping > Why, what, when

Example mapping > Story, Rules, testable What, estimate

Domain modelling > Context map, Domain model

System design > API, C4, guidelines

Coding

Delivery

Doc as Code

Wiki (BA,SA,TA) - **Doc as Code** - Jira (Dev)

doc as code

spec as code

model as code

archi as code

Connect people, with contracts

Event storming > Doc as code > DevTeam

Story mapping > Spec as Code > DevTeam

Example mapping > Spec as code > DevTeam

Domain modelling > Model as code > DevTeam

System design > Archi as code > DevTeam

AI in the game

Narrative > **Agentic** > Event storming > Story mapping, Domain modelling,
Example mapping, C4 > **Agentic** > Code.

Opportunities

AI boosts the documentation.

Documentation is **connected** with development tool chain.

Devs receive the right food.

Empowered people

BA++ : BA + AI > owner of **spec as code**

SA++ : SA + AI > owner of **archi as code**

QA++ : QA + AI > empowered quality engineer

TA++ : TA + AI > empowered **coder**

Dev : Dev + AI > first-consumers of doc as code

The Future?

$(BA, QA, TA)GE++ = BA + QA + \{Devs\}L/P$

Thanks for your attention. Work connected.
